

I am vehemently opposed to PLC in the US. The reason is simple; the high probability of interference to the HF spectrum. Many studies have been conducted and are available for review. With these studies so easily accessible, allowing PLC would mean to \*\*knowingly allow harmful interference\*\* to vital public communications. This would be disastrous.

Also the possibility of other services interfering with PLC signals would prove to be a disaster as well.

Please do NOT allow PLC!

Sincerely,  
Scott Yakoubian
